

INTERNSHIP PROGRAMME

Qualification Task Kit

Two practical tasks per role - the same work you would do with us

16 roles | Development - Design - Marketing - Content - Operations

Submit your work on Instagram

[@realshreyanshsingh](#)

Digital Heroes | digitalheroesco.com

July 2026

Read this first

You have been shortlisted. The next step is a practical task for the role you applied to. Every role in this kit has **two tasks** - **Task A and Task B**. Complete both. They are sized to be done in a single focused day.

The rules

- **Use AI - properly.** ChatGPT, Claude, Gemini, and any other model are fully allowed across both tasks. Use them to learn the concepts you do not know yet, to speed up the parts you do, and to pressure-test your own thinking. We work with these tools every day, so we would rather see how well you direct them than watch you avoid them. Add one short paragraph telling us where you used AI and what you changed afterwards.
- **Make it unmistakably yours.** Many people are working on this exact brief right now. Do not copy another participant, and do not hand in whatever a model gives you on the first prompt. Bring your own angle, your own voice, and your own judgment - the parts that are distinctly you are exactly what we are looking for, and they are what the interview will be built around. A rough submission that is clearly yours beats a polished one that could have come from anyone. Copied or purchased work means immediate disqualification, and we do check.
- **Time window:** 24 hours from receiving this brief. Expected focused effort is 5-7 hours across both tasks, and each task page carries its own estimate. Manage your own time.
- **Do only your role's tasks.** Find your role in the contents list below and complete Task A and Task B for that role only.
- **Send links, not files.** Put everything in a Google Drive folder set to "anyone with the link can view", named **Role_YourFullName**, and send that single link. Broken or private links count as no submission.
- **Walkthroughs are not optional.** Where a task asks for a Loom or screen recording, submissions without it are not reviewed. Two to three minutes is enough.
- **Your work stays yours.** Submissions are used to evaluate you. If we ever want to publish or reuse your work, we will ask you first and credit you.
- **Assumptions are part of the test.** Where a brief is ambiguous, make a sensible call and state the assumption in your submission. Resourcefulness counts.

HOW TO SUBMIT

Send your completed work by Instagram direct message to [@realshreyanshsingh](https://www.instagram.com/realshreyanshsingh). That is the only submission channel.

Follow the account before you send it. If you are not following us, your message lands in our Requests folder, where we are unlikely to see it - and we will not be able to reply, add you to our talent database, or move you to the next round. The connection is what makes everything after this possible, so please make sure it is in place before you submit.

Tap here to open the account: [instagram.com/realshreyanshsingh](https://www.instagram.com/realshreyanshsingh)

What happens after you submit

Every submission is reviewed by our team, and shortlisted candidates are invited to an interview where you will walk through your work and the thinking behind it. That is why your own voice in the task matters so much - the conversation starts from what you made.

We receive a very large volume of applications, so please be patient with us. Reviews take time and we work through them in order. Our team will reach out to you on Instagram, and you may be asked to fill in a short form before your interview is scheduled. There is no need to send repeated follow-up messages - as long as you are following the account, we can reach you.

Roles in this kit

01 Project Manager	07 E-commerce Developer (Shopify)	13 Copywriting
02 Business Development (Sales)	08 UI/UX Design	14 Content Writing
03 Software Development (SDE)	09 Human Resources (HR)	15 Client Success Representative
04 Full Stack Development	10 Social Media Marketing	16 Graphic Design
05 Web Development	11 Content Creator	
06 Mobile App Developer	12 Search Engine Optimization (SEO)	

We are not looking for perfection. We are looking for judgment, craft, and follow-through. Digital Heroes | digitalheroesco.com

ROLE 01 / 16

Project Manager

What this tests: Planning under pressure, scope judgment, and client communication on real agency delivery.

TASK A - Rescue a slipping project

A US client's Shopify migration is mid-flight. Team: 3 developers, 1 designer. Launch is in 10 days. The client has just requested a "small" loyalty-program feature, and your lead developer is out sick for the next 2 days.

- a) Re-plan the project: a work-breakdown structure and timeline (Sheets, Notion, any tool) showing the critical path and exactly what moves because of the sick leave.
- b) Build a risk register: the top 5 risks right now, each with likelihood, impact, and a concrete mitigation.
- c) Make the scope call on the loyalty feature - accept, defer, or trade against existing scope - and state your reasoning in 5 lines.

Deliverables

- Plan link or file (WBS + timeline)
- Risk register

Estimated effort: 2-3 hours

How we score it

Evaluation criterion	Weight
Planning realism and critical-path logic	40
Scope judgment	30
Risk thinking	30
Total	100

TASK B - Communicate the decision

Same project as Task A. Now you have to tell people.

- a) Write the actual client-facing email communicating your scope decision - firm, warm, and specific about what happens next.
- b) Write the internal stand-up message you would post to the team tomorrow morning.
- c) Record a 3-minute Loom walking through your plan and the reasoning behind the scope call.

Deliverables

- Client email (text)
- Internal team message (text)
- Loom walkthrough

Estimated effort: 2-3 hours

How we score it

Evaluation criterion	Weight
Client-facing communication quality	40
Internal clarity and tone	30
Walkthrough clarity	30
Total	100

ROLE 02 / 16

Business Development (Sales)

What this tests: Prospect research, outbound craft, objection handling, and commercial instinct.

TASK A - Build the target list

You are building - not sending - a mini outbound campaign for Digital Heroes' Shopify development service, aimed at US e-commerce brands. Contacting any prospect on our behalf is grounds for disqualification.

- a) Define the ideal customer profile in 5 sharp bullets: store size, platform, buying signals, budget band, decision-maker.
- b) Research 15 real prospects using public information only: brand, website, why they fit, and one trigger signal (slow site, recent funding, weak mobile UX).
- c) Rank your 15 by priority and explain your top 3 in two lines each.

Deliverables

- ICP one-pager
- Prospect sheet (15 rows with reasoning and ranking)

Estimated effort: 2-3 hours

How we score it

Evaluation criterion	Weight
Prospect quality and fit reasoning	45
ICP sharpness	30
Prioritization logic	25
Total	100

TASK B - Write the outreach and pitch it

Same campaign. Now write the messages and sell it out loud.

- a) Write a 3-email cold sequence plus 1 LinkedIn DM, personalized to one prospect from Task A as a worked example.
- b) Handle these two objections in writing: "We already have an agency" and "You're based in India - how do I trust the quality and communication?"
- c) Record a 2-minute Loom pitching Digital Heroes as if you are opening a discovery call with your best-fit prospect.

Deliverables

- Email sequence + DM (text)
- Objection responses (text)
- Loom pitch

Estimated effort: 2-3 hours

How we score it

Evaluation criterion	Weight
Message quality and personalization	40
Objection handling	30
Pitch delivery and energy	30
Total	100

ROLE 03 / 16

Software Development (SDE)

What this tests: API design, correctness, error handling, and shipping something that actually runs.

TASK A - Build Page Pulse

Build a small web tool that audits any URL. Any language or stack you like.

- a) Backend: an endpoint that accepts a URL, fetches the page, and returns a JSON report with HTTP status, response time, page title, meta description, H1 count, images missing alt text, and approximate word count.
- b) Frontend: a simple page with an input field that calls your endpoint and renders the report cleanly.
- c) Handle failure properly: invalid URLs, timeouts, non-HTML responses - sensible errors, never a crash.

Deliverables

- Public GitHub repo
- Live deployed link (any free tier)

Estimated effort: 3-4 hours

How we score it

Evaluation criterion	Weight
Correctness and error handling	40
Code quality and structure	35
API design	25
Total	100

LIVE BUILD REQUIREMENT

Because this task produces a live website or public page, add a visible credit line in the footer reading "Built for Digital Heroes Training Task", linked to digitalheroesco.com, and include the live URL with your submission. This is how we verify the build is yours.

TASK B - Prove it and explain it

Take the tool from Task A and make it defensible.

- a) Write tests for the parsing logic - at minimum, the happy path and two failure cases.
- b) Write a README covering setup, the API contract, and 3 design decisions you made with the reasoning behind each.
- c) Record a Loom demo showing the tool working and walking through one part of the code you would change if you had another day.

Deliverables

- Test files in the repo
- README
- Loom demo

Estimated effort: 2-3 hours

How we score it

Evaluation criterion	Weight
Test quality	40
README and reasoning	30
Self-critique in walkthrough	30
Total	100

LIVE BUILD REQUIREMENT

Because this task produces a live website or public page, add a visible credit line in the footer reading "Built for Digital Heroes Training Task", linked to digitalheroesco.com, and include the live URL with your submission. This is how we verify the build is yours.

ROLE 04 / 16

Full Stack Development

What this tests: The complete loop: frontend, backend, data model, auth, and deployment of one coherent product.

TASK A - Build LeadDesk Mini

Build a small lead-capture product with a public side and an admin side.

- a) Public landing page with a lead form - name, email, budget range, message - with client-side and server-side validation.
- b) Store submissions in a real database (Postgres, MySQL, MongoDB, SQLite, Supabase, Firebase - your choice).
- c) Admin view at /admin listing all leads with search and a status toggle: New / Contacted / Closed.

Deliverables

- Live landing page URL
- Admin URL
- Public GitHub repo

Estimated effort: 3-4 hours

How we score it

Evaluation criterion	Weight
End-to-end completeness	40
Data modeling and backend quality	35
UX and validation	25
Total	100

LIVE BUILD REQUIREMENT

Because this task produces a live website or public page, add a visible credit line in the footer reading "Built for Digital Heroes Training Task", linked to digitalheroesco.com, and include the live URL with your submission. This is how we verify the build is yours.

TASK B - Secure it and ship it

Take LeadDesk Mini from Task A and make it something you would let a client touch.

- a) Add real login for the admin area - not a hardcoded string - with sessions or tokens handled properly.
- b) Deploy the whole thing on a free tier and confirm it works from a fresh browser with no local state.
- c) Write a README explaining your data model and your auth approach, and record a Loom walking the flow from form submission to status change.

Deliverables

- Deployed URLs + test credentials
- README
- Loom walkthrough

Estimated effort: 2-3 hours

How we score it

Evaluation criterion	Weight
Auth implementation	40
Deployment reliability	30
Documentation and walkthrough	30
Total	100

LIVE BUILD REQUIREMENT

Because this task produces a live website or public page, add a visible credit line in the footer reading "Built for Digital Heroes Training Task", linked to digitalheroesco.com, and include the live URL with your submission. This is how we verify the build is yours.

ROLE 05 / 16

Web Development

What this tests: Hand-built responsive layout, semantic code, performance discipline, and visual finishing.

TASK A - Build a one-page agency site

Build a responsive one-page website for a fictional agency, NorthPeak Digital. No page builders - no WordPress, Webflow, or Wix. Vanilla HTML/CSS/JS or any framework is fine.

- a) Sections required: hero with headline and CTA, services grid of 6, results or testimonials, pricing with 3 tiers, and a contact form with client-side validation.
- b) Fully responsive: it must look intentional at 360px, 768px, and 1440px.
- c) Deploy it (Netlify, Vercel, GitHub Pages) and push the code to a public repo.

Deliverables

- Live URL
- Public GitHub repo

Estimated effort: 3-4 hours

How we score it

Evaluation criterion	Weight
Visual quality and responsiveness	45
Code quality and semantics	35
Form and detail work	20
Total	100

LIVE BUILD REQUIREMENT

Because this task produces a live website or public page, add a visible credit line in the footer reading "Built for Digital Heroes Training Task", linked to digitalheroesco.com, and include the live URL with your submission. This is how we verify the build is yours.

TASK B - Make it fast and accessible

Take your Task A site and optimize it properly.

- a) Get Lighthouse to 90+ on both Performance and Accessibility. Attach screenshots of the reports.
- b) Write a short changelog: what you changed to get there, and what each change bought you.
- c) Record a Loom pointing out 3 details you are proud of and one thing you would do differently.

Deliverables

- Lighthouse screenshots
- Optimization changelog
- Loom walkthrough

Estimated effort: 2-3 hours

How we score it

Evaluation criterion	Weight
Score improvement and technique	45
Quality of the changelog reasoning	30
Walkthrough clarity	25
Total	100

LIVE BUILD REQUIREMENT

Because this task produces a live website or public page, add a visible credit line in the footer reading "Built for Digital Heroes Training Task", linked to digitalheroesco.com, and include the live URL with your submission. This is how we verify the build is yours.

ROLE 06 / 16

Mobile App Developer

What this tests: List/detail architecture, API integration, state handling, and UI polish in Flutter or React Native.

TASK A - Build an Order Tracker

Build a 2-screen Order Tracker in Flutter or React Native. First create your own mock API: seed at least 8 orders (id, customer, items, amount, status, placed_at) using mockapi.io or a raw JSON file hosted on GitHub.

- a) Screen 1 - orders list fetched from your mock API, with pull-to-refresh and colored status chips.
- b) Screen 2 - order detail, opened by tapping an order, showing a vertical status timeline.
- c) Implement loading, empty, and error states on the list screen.

Deliverables

- Public GitHub repo
- Mock API URL
- APK or Expo link

Estimated effort: 3-4 hours

How we score it

Evaluation criterion	Weight
Functionality and state handling	45
UI quality	30
Code structure	25
Total	100

LIVE BUILD REQUIREMENT

Because this task produces a live website or public page, add a visible credit line in the footer reading "Built for Digital Heroes Training Task", linked to digitalheroesco.com, and include the live URL with your submission. This is how we verify the build is yours.

TASK B - Polish and demo

Take the app from Task A and finish it like a real release.

- a) Add one tasteful animation - screen transition, list entrance, or timeline progression.
- b) Handle the offline case: what the user sees when the network is unavailable, and what happens when it returns.
- c) Record a Loom demo on a device or emulator, including deliberately triggering the error state.

Deliverables

- Updated repo + build
- Loom demo showing error and offline states

Estimated effort: 2-3 hours

How we score it

Evaluation criterion	Weight
Offline and edge case handling	40
Animation and detail	30
Demo quality	30
Total	100

LIVE BUILD REQUIREMENT

Because this task produces a live website or public page, add a visible credit line in the footer reading "Built for Digital Heroes Training Task", linked to digitalheroesco.com, and include the live URL with your submission. This is how we verify the build is yours.

ROLE 07 / 16

E-commerce Developer (Shopify)

What this tests: Liquid fundamentals, theme architecture, customizer schema design, and no-app problem solving.

TASK A - Build a custom Liquid section

Create a free Shopify development store at partners.shopify.com and work on a free theme such as Dawn.

- Set up 5 demo products with sensible collections, tags, and images - basic store hygiene counts.
- Build one custom Liquid section from scratch - Feature Highlight: image, heading, text, and CTA button, all editable from the theme customizer via schema settings including colour and alignment options.
- Make sure it degrades gracefully when a merchant leaves a field empty.

Deliverables

- Store preview URL + password
- The section .liquid file

Estimated effort: 3-4 hours

How we score it

Evaluation criterion	Weight
Liquid and schema design	50
Store setup hygiene	25
Graceful handling of empty states	25
Total	100

LIVE BUILD REQUIREMENT

Because this task produces a live website or public page, add a visible credit line in the footer reading "Built for Digital Heroes Training Task", linked to digitalheroesco.com, and include the live URL with your submission. This is how we verify the build is yours.

TASK B - Solve it without apps

Same store. Merchants install apps for everything - show that you do not have to.

- a) Add trust badges to the product page using a section or snippet. No apps.
- b) Add one more merchandising touch of your choice - a size guide, a delivery estimate, or a bundle prompt - again with no apps.
- c) Keep the store fast: compressed images, no unnecessary scripts. Record a Loom walking through your schema decisions and what you deliberately did not do.

Deliverables

- Updated store link
- Code files for both additions
- Loom walkthrough

Estimated effort: 2-3 hours

How we score it

Evaluation criterion	Weight
No-app problem solving	45
Code quality	30
Performance awareness and reasoning	25
Total	100

LIVE BUILD REQUIREMENT

Because this task produces a live website or public page, add a visible credit line in the footer reading "Built for Digital Heroes Training Task", linked to digitalheroesco.com, and include the live URL with your submission. This is how we verify the build is yours.

ROLE 08 / 16

UI/UX Design

What this tests: Critique ability, visual craft, responsive thinking, and design communication.

TASK A - Critique and redesign

Choose one brief: (A) redesign the homepage of digitalheroesco.com, or (B) design a landing page for a fictional Shopify-analytics product called StoreLens. Whichever you pick, keep it for both tasks.

- a) Heuristic critique: 10 specific findings on the current page - or on a real competitor page if you chose StoreLens - each as issue, why it matters, suggested fix.
- b) High-fidelity design in Figma: desktop at 1440px and mobile at 375px.
- c) Make deliberate typographic and hierarchy choices - be ready to defend every one.

Deliverables

- Figma view link containing critique and both designs

Estimated effort: 3-4 hours

How we score it

Evaluation criterion	Weight
Visual craft	40
UX reasoning and hierarchy	35
Critique quality	25
Total	100

TASK B - Systematize and present

Take your Task A design and make it something a developer could build and a client could approve.

- a) Add a design token sheet: type scale, colour palette with usage notes, and spacing system.
- b) Annotate 5 key design decisions directly on the file - hierarchy, contrast, CTA placement, and so on.
- c) Record a 3-minute Loom presenting the design as if to a client, not as if to another designer.

Deliverables

- Updated Figma link with tokens and annotations
- Loom presentation

Estimated effort: 2-3 hours

How we score it

Evaluation criterion	Weight
Token system quality	35
Annotation clarity	30
Client presentation ability	35
Total	100

ROLE 09 / 16

Human Resources (HR)

What this tests: High-volume screening design, structured evaluation, candidate empathy, and process metrics.

TASK A - Design a high-volume funnel

You have received 2,400 applications for one Web Development internship. You must produce a shortlist of 20 within 5 working days, with 2 HR people available.

- Design the funnel: a stage-by-stage process showing expected volume at each stage and the time budget per stage. It must be mathematically feasible for 2 people - show the arithmetic.
- Define the knock-out criteria and justify each one.
- Build a 10-question pre-screen form with a scoring key.

Deliverables

- Funnel document with volume and time arithmetic
- Pre-screen form + scoring key

Estimated effort: 2-3 hours

How we score it

Evaluation criterion	Weight
Funnel logic and feasibility	45
Screening criteria quality	30
Scoring design	25
Total	100

TASK B - Screen humans well

Same scenario. Now the part where you talk to people.

- a) Write a structured 15-minute screening call script with a 1-5 scoring rubric per question.
- b) Draft two templates that respect candidates at scale: a rejection email and a shortlist next-step email.
- c) Define 3 metrics you would track to judge whether the funnel itself is working, and record a short Loom explaining your process.

Deliverables

- Interview script + rubric
- Both email templates
- Metrics list
- Loom walkthrough

Estimated effort: 2-3 hours

How we score it

Evaluation criterion	Weight
Interview structure and rubric	40
Candidate experience and tone	35
Metrics thinking	25
Total	100

ROLE 10 / 16

Social Media Marketing

What this tests: Analytical audit skill, content strategy, hook writing, and presenting a plan.

TASK A - Audit and plan

Your subject is the Digital Marketing Heroes presence on Instagram and YouTube. Finding the accounts is part of the task.

- a) Audit: 5 things working and 5 gaps, each with reasoning based on what you actually observe - formats, hooks, consistency, engagement patterns.
- b) Build a 7-day content calendar: for each day, the format (reel, carousel, story), topic, hook line, and CTA.
- c) Define 3 KPIs with realistic 30-day targets and say why those three.

Deliverables

- Audit document
- 7-day calendar
- KPI sheet

Estimated effort: 2-3 hours

How we score it

Evaluation criterion	Weight
Insight quality of the audit	40
Calendar strategy and hooks	35
KPI realism	25
Total	100

TASK B - Make the content

Turn your Task A plan into things that exist.

- a) Write one complete 30-45 second reel script: hook, beats, on-screen text, caption, hashtags.
- b) Design one carousel - Canva is fine - and export the slides.
- c) Record a Loom presenting the plan and the assets as if to the founder.

Deliverables

- Reel script
- Carousel slides
- Loom presentation

Estimated effort: 2-3 hours

How we score it

Evaluation criterion	Weight
Reel script craft and hook	40
Carousel execution	35
Presentation	25
Total	100

ROLE 11 / 16

Content Creator

What this tests: The full creation loop: scripting, shooting, editing, and packaging finished short-form video.

TASK A - Produce one reel

Produce one finished 45-60 second reel on a topic of your choice from: "3 Shopify mistakes killing your sales", "Why your website loads slow and how to fix it", or "AI is changing SEO - here is what actually matters now".

- a) Script it first: hook in the first 2 seconds, body beats, CTA. Submit the script.
- b) Shoot on your phone - face-cam, or voiceover with b-roll and screen recording. Audio must be clean.
- c) Edit with captions and pacing appropriate for Reels, and write the caption and hashtags as if publishing.

Deliverables

- Final video file (MP4, 9:16)
- Script document
- Caption + hashtags

Estimated effort: 3-4 hours

How we score it

Evaluation criterion	Weight
Hook strength	35
Editing and pacing	35
Clarity of value delivered	30
Total	100

TASK B - Repurpose it

One idea should not produce one asset.

- a) Turn the same idea into a carousel - design the slides, not just the text.
- b) Turn it into a 3-frame story sequence with a clear action at the end.
- c) Record a 2-minute Loom explaining your creative choices and what you would test differently next time.

Deliverables

- Carousel slides
- Story frames
- Loom on creative choices

Estimated effort: 2-3 hours

How we score it

Evaluation criterion	Weight
Adaptation across formats	40
Design and packaging quality	35
Creative reasoning	25
Total	100

ROLE 12 / 16

Search Engine Optimization (SEO)

What this tests: Audit prioritization, keyword-intent mapping, on-page craft, and awareness of AI-era search.

TASK A - Audit and research

Your subject is digitalheroesco.com - a Shopify development and digital marketing agency targeting the US, UK, and Australia.

- a) On-page audit of one page of the site, your pick: 10 findings, prioritized, each as issue, impact, recommended fix.
- b) Keyword research: 10 keywords a Shopify agency targeting the US should pursue, with search intent, your difficulty judgment, and the page type each maps to.
- c) Rewrite the title tag and meta description for 3 pages of the site.

Deliverables

- Audit document
- Keyword sheet
- Title and meta rewrites

Estimated effort: 2-3 hours

How we score it

Evaluation criterion	Weight
Audit prioritization	40
Keyword and intent quality	35
Title and meta craft	25
Total	100

TASK B - Test AI search

Search is no longer only ten blue links. Find out what the AI answers actually say.

- a) Ask ChatGPT and Perplexity these exact queries: "best Shopify development agency", "top Shopify agencies for small business", "should I hire a Shopify expert or a freelancer". Screenshot every answer.
- b) List which brands get cited in each answer and identify what those brands appear to have in common.
- c) Give 3 recommendations for how an agency earns citations in AI answers, then write one content brief for your best keyword from Task A: working title, H2/H3 outline, entities to cover, and a 4-question FAQ.

Deliverables

- Screenshots of all six answers
- Citation analysis and 3 recommendations
- Content brief

Estimated effort: 2-3 hours

How we score it

Evaluation criterion	Weight
Rigor of the AI-visibility analysis	40
Quality of recommendations	30
Content brief quality	30
Total	100

ROLE 13 / 16

Copywriting

What this tests: Headline craft, persuasion technique, and adapting one message across formats.

TASK A - Write the page

Everything is for one offer: Digital Heroes' Shopify store development service, aimed at US small-business owners.

- a) Write 3 hero headline and subheadline variants, each from a different angle: outcome-led, pain-led, and proof-led.
- b) Write one full landing-page hero section: headline, subheadline, 3 benefit bullets, CTA button text.
- c) Write a 300-word service description in marketplace style - scannable, specific, zero fluff.

Deliverables

- One document with all copy, clearly labeled

Estimated effort: 2-3 hours

How we score it

Evaluation criterion	Weight
Headline craft	40
Clarity and flow	30
Specificity over fluff	30
Total	100

TASK B - Sell it in short form

Same offer, tighter constraints.

- a) Write 2 Facebook ad variants: primary text, headline, and CTA for each.
- b) Write 1 cold email, maximum 120 words.
- c) Add a 5-line rationale naming the psychological lever each piece pulls - social proof, loss aversion, specificity, and so on.

Deliverables

- Ad variants
- Cold email
- Rationale

Estimated effort: 2-3 hours

How we score it

Evaluation criterion	Weight
Persuasion technique	40
Compression and discipline	30
Rationale quality	30
Total	100

ROLE 14 / 16

Content Writing

What this tests: Research depth, structure, SEO execution, and readable expert voice from a real brief.

TASK A - Write the article

Brief - title direction: "Shopify vs WooCommerce in 2026: Which Is Right for Your Small Business?" Primary keyword: shopify vs woocommerce. Audience: US and UK small-business owners, non-technical. Length: 1,200-1,500 words.

- a) Structure it for scanning: descriptive H2s and H3s, short paragraphs, and a comparison table covering at least 6 dimensions.
- b) Include a clear recommendation framework - choose Shopify if, choose WooCommerce if. Take positions; do not fence-sit.
- c) Write in an expert voice a non-technical reader can follow without a glossary.

Deliverables

- Google Doc with the full article

Estimated effort: 3-4 hours

How we score it

Evaluation criterion	Weight
Depth and accuracy	35
Structure and scannability	35
Voice and readability	30
Total	100

TASK B - Optimize and extend

An article is not finished when the prose is finished.

- a) Add a 4-question FAQ written to be featured-snippet and AI-answer friendly - direct answers in the first sentence.
- b) Write the meta title (max 60 characters) and meta description (max 155 characters), and suggest 3 internal links to plausible agency pages with sensible invented URLs.
- c) Repurpose the article into one LinkedIn post that stands on its own and does not read like a summary.

Deliverables

- FAQ section
- Meta title and description
- Internal link suggestions
- LinkedIn post

Estimated effort: 2-3 hours

How we score it

Evaluation criterion	Weight
SEO execution	40
Answer-format discipline	30
Repurposing quality	30
Total	100

ROLE 15 / 16

Client Success Representative

What this tests: Tone, de-escalation, boundary-setting, commercial instinct, and on-camera presence.

TASK A - Handle four clients

Write the actual reply - email or chat, whichever fits - to each of these four situations. They mirror real conversations with our US and UK clients.

- a) Angry client: their Shopify store launch slipped by 5 days and they are threatening a public review. De-escalate and rebuild trust.
- b) Scope creep: a client asks for "one small extra feature" outside the agreed scope, for the third time. Hold the boundary without souring the relationship.
- c) Silent client: no replies for 3 weeks since delivery, renewal due in 30 days. Re-engage.
- d) Happy client: they just launched and love it. Turn the moment into a review, a referral, and an upsell conversation - without being pushy.

Deliverables

- One document with all four responses

Estimated effort: 2-3 hours

How we score it

Evaluation criterion	Weight
Tone and empathy	35
De-escalation and boundary skill	35
Commercial instinct	30
Total	100

TASK B - Do it live

Written is easy. Talking is the job.

- a) Record a 3-minute Loom handling the angry client from Task A as if on a live call - you speaking to camera.
- b) List 3 client-health metrics you would track and what each one would tell you before a client churns.
- c) Write the internal note you would leave for the team after that call.

Deliverables

- Loom mock call
- Client-health metrics
- Internal handover note

Estimated effort: 2-3 hours

How we score it

Evaluation criterion	Weight
On-call presence and composure	45

ROLE 16 / 16

Graphic Design

What this tests: Visual identity craft, layout discipline, format range, and design rationale.

TASK A - Build a mini brand identity

Create the visual identity for a fictional brand: Harvest & Co, a direct-to-consumer organic snack brand selling to US customers aged 25-40.

- a) Design the logo - primary and one alternate lockup - and show it working at both large and very small sizes.
- b) Define the colour palette with usage rules and the type system with a clear hierarchy.
- c) Show it applied to 3 real surfaces: packaging label, business card, and an Instagram profile setup.

Deliverables

- Presentation file or PDF with logo, palette, type system, and 3 applications
- Source file link (Figma, Illustrator, or Canva)

Estimated effort: 3-4 hours

How we score it

Evaluation criterion	Weight
Logo craft and versatility	35
Colour and type system	35
Application quality	30
Total	100

TASK B - Design for the feed and the ad

Same brand, now in the formats it actually lives in.

- a) Design a set of 3 Instagram posts and 1 story template that are visibly one family, not three unrelated designs.
- b) Design one paid ad creative in two sizes - 1:1 and 9:16 - with copy that is legible on a phone at arm's length.
- c) Write a one-page rationale: your visual decisions, and how they serve the audience rather than your taste.

Deliverables

- Post set and story template (exported)
- Ad creative in both sizes
- Design rationale

Estimated effort: 2-3 hours

How we score it

Evaluation criterion	Weight
Visual consistency across the set	35
Layout and legibility	35
Design rationale	30
